

OCULAR GONIOMETER

Description:

The ocular goniometer is a new device, whose function is double, on the one hand, it marks a certain axis on the surface of the eye quickly and precisely, and, on the other hand, it is capable of measuring the angle at which it is located. a certain brand. These characteristics are especially useful in the surgical treatment of astigmatism.

Keywords:

[Ophthalmology](#), [Astigmatism](#), [Intraocular Lenses](#)

Sectors:

[Health](#), [Engineering](#)

Areas:

[Health Sciences](#), [Instrumentation](#), [Technological Improvements](#)

Advantages:

The ocular goniometer is accurate, fast, easy and simple to use and very economical. It would favor the precise surgical treatment of astigmatism in economically disadvantaged environments.

Uses and Applications:

Its use belongs mainly to the ophthalmology sector, and secondarily to the optics sector.

Patent Number: WO2019229287A1

Applicants: Universidad De Málaga, Salvador Nebro Cobos - Centro Oftalmológico Benalmádena Slp

Inventors: Salvador Nebro Cobos, Manuel Damian Marin Granados, Oscar David De Cozar Macias, Juan Antonio Bascuñana Pareja, Joaquín Fernández Cabrera

Filing Date: 31/05/2018

Protection Level: National (Spain) and international

Processing Status: Spanish patent and international protection application
