

REMOVABLE COVERING CARPET

Description:

Removable surface covering tapestry characterized in that it comprises a flexible sheet and decorative elements that can differ in heights and shapes, fixed to said flexible sheet by mechanical means in shape and distribution such that they allow the replacement of each decorative element as well as, optionally, the rotation or rotation of said decorative elements with respect to the point or axis of their attachment. The type of mechanical fixing means that can be used, as well as the non-involvement of adhesives or cements, among others, allow the placement, disassembly and transport of the tapestry to be easy and comfortable. Likewise, the tapestry can have an integral format or a modular format.
